About this Course:

This course is intended to address the needs of general radiologists, neuroradiologists, trainees, and technologists practicing in the community. All course material will be presented in a case-based format to ensure practical information delivery in its clinical context. We will discuss common pitfalls in neuroradiology and ways of avoiding them. The program will serve as a general and comprehensive review of brain, spine and head and neck imaging in adults and children.

Learning Objectives:

- Discuss latest terminology and developments in the field of neuroradiology practice in the context of applied neurologic disease diagnoses and treatments.
- Adapt relevant latest neuroimaging techniques, when applicable, to their practice.
- Interpret neuroimaging studies with an up-to-date approach using latest knowledge and techniques.
